

Introductory information for the Final Project

The Assignment

You will work in groups on a small research project:

- You are free to choose the main area you want to investigate but your research should use either CA or Networks.
- You will first have to write a Project Plan and then a Final Report.
 - Project Plan (5%) deadline draft 6th of May, final deadline 11th May
 - Final Report (25%) deadline 27th of May

Choosing the Project

Deciding what to work on can be challenging:

- ▶ Do some literature research to decide what to work on and find a research question.
- ▶ Decide how you will try to investigate your question: CA? Networks? etc.
- ▶ Be sure that the project is feasible in the short amount of time you have.
- ▶ The project should not be a programming project (but you may need to code).

What Should We Do?

Examples of what to do:

- You can extend an existing CA, or build one from scratch and perform experiments with them.
- For networks you can analyse an existing one, perform experiments using synthetic networks, or a combination of the two, or use the models that you used in your labs.

Get Inspired

To get inspired:

- You can have a look at [NetLogo Models Library](#)
- You can have a look at Networks dataset in the repositories on [Canvas](#)
- Once you get a more precise idea on the general area you want to study start your literature research

Project Plan

The project plan is meant to help you start your project:

- Have a look at the grading rubric on Canvas.
- Use this as an opportunity to get feedback from us on your idea.
- Some questions that should help you with your plan:
 - What is the specific topic that you want to study?
 - What's the research question you are going to work on?
 - What kind of results are you going to measure and how?
 - How does this help to answer the research question?
 - What kind of “experiments” can you perform?

During the Project

- During the project we will not have normal classes.
- On the 12th and the 19th we will reserve time for optional individual meetings (email us if interested).
- On the 22nd you will give a short presentation of your project (10 minutes per group)

The Final Report

- The final report should consist of a short paper on your research.
- Have a look at the grading rubric on Canvas to see what we expect.
