Assessment criteria			Weight	Grade	feedback
Content	Introduction	The background for the model is given and the research question is clearly formulated. The introduction provides earlier results and/or expectations.	2.0		
	Material & Methods	The research question is correctly translated to a mathematical model and work plan. The model is clearly described, so that it in principle could be replicated.	3.0		
	Results	The results are properly described and structured in a logical order, including references to figures. The figures, including legends, are meaningful and well described in the text.	3.0		
	Discussion	Correct conclusions are drawn and the research question is addressed. The implication of the results is discussed. Suggestions for future research are provided.	3.0		
Structure	Hour glass/IMRD	The research project is written according to the hour glass model (starting general, focusing on the actual research questions, and discussing the results in a wider context).	1.0		
Appearance	Language	The research report is written in correct English. Scientific language is used.	1.0		
	Title page	A title page is provided, including a good project title and student details.	0.5
